**F-Secure achieves top scores in independent antivirus tests**

**F-Secure’s 2010 security software has received the highest Advanced+ score across five tests conducted by AV-Comparatives.org this year.**

Helsinki, Finland- January 13, 2010: F-Secure’s latest antivirus solutions are the best of breed, according to test results from the independent research organization AV-Comparatives.org. F-Secure achieved the highest possible Advanced+ result in five categories that test the key features of a security product – showing an exceptional level of performance for the 2010 version.

**Pirkka Palomäki**, Chief Technology Officer at F-Secure, says, “We are very proud to have a straight flush of Advanced+ scores in the AV-Comparatives.org tests for our 2010 antivirus products. This is the result of our long-term dedication to product development and our commitment to delivering outstanding performance without compromising security.”

AV-Comparatives.org is an Austrian non-profit organization providing independent antivirus software tests free to the public. In late 2009 it carried out comprehensive tests on the 2010 versions of all antivirus products on the market in six tests:

Test Results AV-Comparatives.org		
Test	F-Secure Certificate	What the test measures
Performance	Advanced+ 	Overall system impact
Malware removal	Advanced+ 	Malware removal and cleaning capability
On demand	Advanced+ 	Detection rates and scanning speed
Potentially unwanted applications	Advanced+ 	Detection of adware, spyware and rogue antivirus
Whole product dynamic test	Advanced 	Protection under real-world conditions
Retrospective	Advanced+ 	New malware detection

AV-Comparatives.org provides a four level ranking system: Advanced+, Advanced, Standard, and Tested.

Pirkka Palomäki says, “The outstanding results in the performance test show that F-Secure has listened to the needs of its customers. A smaller overall system impact, less memory use and faster scanning mean a faster and smoother operation, so our customers get the most out of their computers while

staying fully protected. I'm also pleased that AV-Comparatives.org has highlighted F-Secure's redesigned and easy-to-use graphical interface."

The test results from AV-Comparatives.org show that F-Secure's antivirus solutions have a negligible system impact but are blazing fast and efficient in detecting and removing all Internet threats. In the WorldBench test used by the organization (an industry-recognized performance test that simulates real-world computer usage), F-Secure's product slowed down a computer by only 3.6% compared to a computer not having any antivirus. The industry average impact is 11.1%.
